

Creating Subdomain WordPress CMS Websites

On a Web Host, Like SiteGround

Learning Objectives

- Learn how to create subdomain WordPress sites on a web host (like SiteGround) using CPanel
- Understand the difference between In-Directory and sub domain websites

Creating a Subdomain WordPress CMS site is a multi-step process

- First - create the subdomain
- Second – Create an admin email account for the subdomain
- Third – create a WordPress site as a **subdomain** site, not an in-directory site

STEP 1 – Access Your Web Host

Open a web browser and navigate to the SiteGround web host login page

[Web Hosting Services by SiteGround](#)

STEP 2 – Login to Your Web Host

Login to your web host account

The image shows the SiteGround user login interface. At the top left is the SiteGround logo, and at the top right is the text "USER LOGIN". Below this, there are two input fields. The first is labeled "Username:" and contains a small user icon and a text input field. The second is labeled "Password:" and contains a small padlock icon and a text input field with the placeholder text "type your password". To the right of the password field is a link that says "Forgot Your Password?". Below the input fields is a large green button with the text "LOGIN". At the bottom of the form, there is a footer that says "SiteGround • Get Hosting • Become Affiliate".

STEP 3 – My Accounts

Select the “My Accounts” tab

STEP 4 - cPanel

Select the “Go to cPanel” button

The screenshot shows the SiteGround user dashboard for the account 'CMS-FREELANCERS.COM'. The 'My Accounts' tab is highlighted with a yellow box. Below the account information, the 'Go to cPanel' button is highlighted with a red arrow. The dashboard also displays a list of installed WordPress sites with their respective URLs and versions.

Sub domain vs. In-Directory CMS Sites

- We will be creating only in-directory CMS sites in IT320 for activities and assignments
- If you want to practice with sub-domain CMS you may need a non-free SiteGround account.
 - Last quarter I noticed that some of the student free accounts did not support sub domain site creation
- Please check your web host to see if your account supports both types
- IT 320 Assignments will only be in-directory sites

Sub Domains On SiteGround

- The following slides are for those who wish to experiment with CMS sites as sub domain sites.

Creating Sub domain WordPress Sites

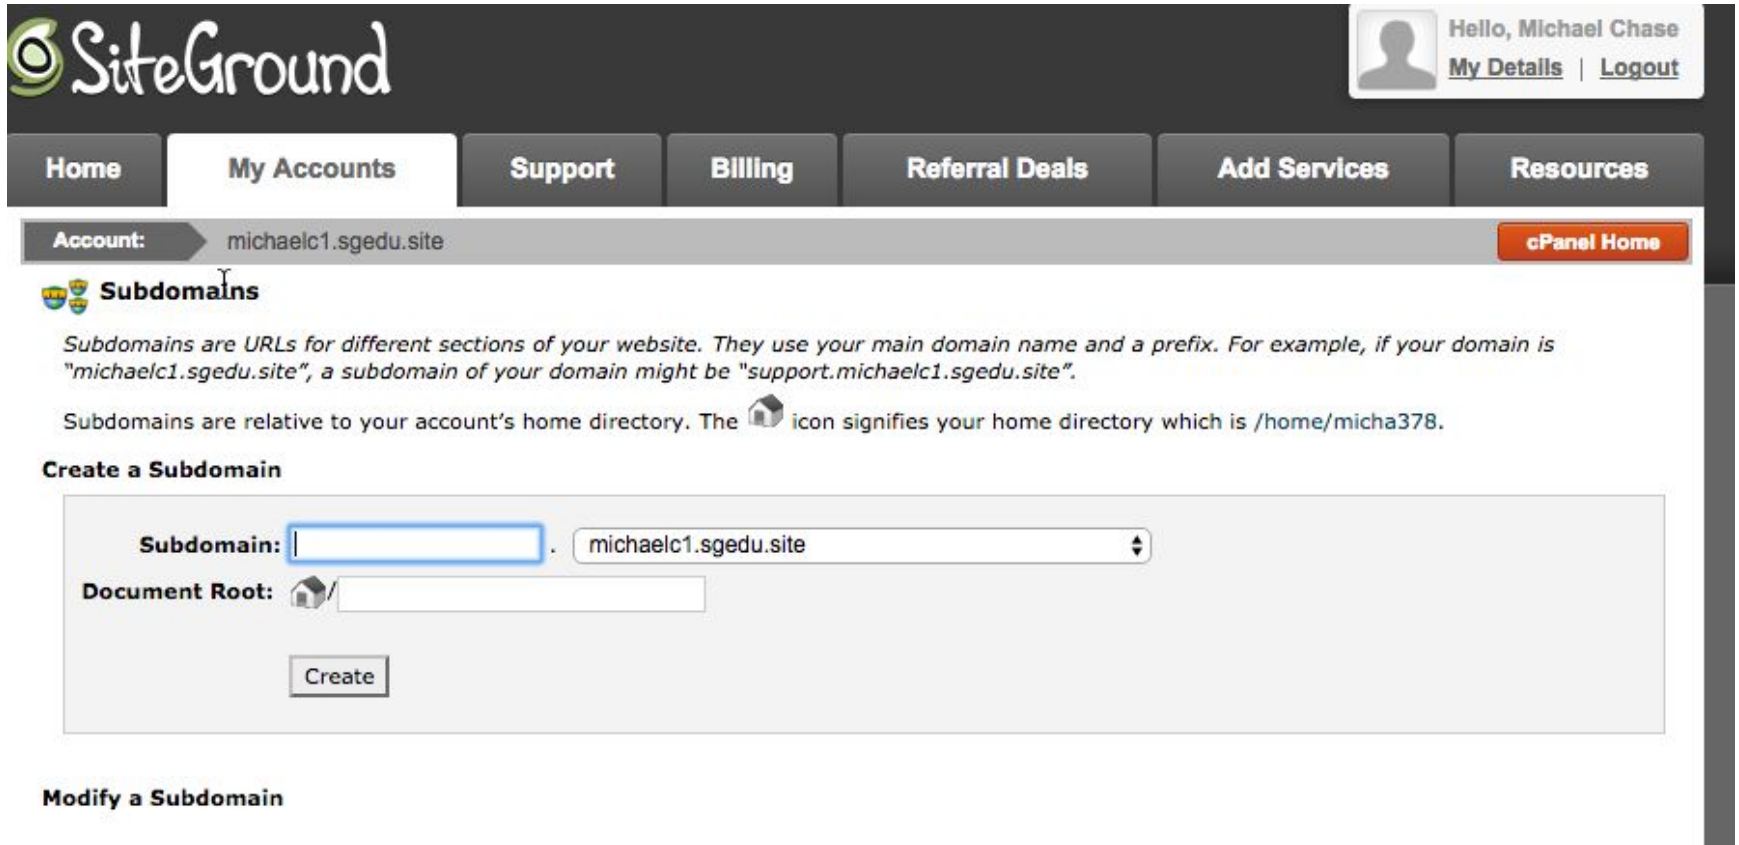

- *Sub domains are URLs for different sections of your website. They use your main domain name and a prefix.*
- *For example, if your domain is michaelc1.sgedu.site a sub-domain named support of your domain would be michaelc1.sgedu.site*
- Sub domains are relative to your account's home directory.
- The icon signifies your home directory which is */home/michaelc1.sgedu.site* .

Create the Subdomain

cPanel Select Subdomains

Enter the Subdomain name “support” and press Create

The screenshot shows the SiteGround cPanel interface. At the top, the SiteGround logo is on the left, and a user greeting "Hello, Michael Chase" with links for "My Details" and "Logout" is on the right. Below this is a navigation bar with tabs: Home, My Accounts (selected), Support, Billing, Referral Deals, Add Services, and Resources. Under the "My Accounts" tab, the account name "michaelc1.sgedu.site" is displayed, along with a "cPanel Home" button. The main section is titled "Subdomains" and includes an explanatory paragraph: "Subdomains are URLs for different sections of your website. They use your main domain name and a prefix. For example, if your domain is 'michaelc1.sgedu.site', a subdomain of your domain might be 'support.michaelc1.sgedu.site'." Below this, it states: "Subdomains are relative to your account's home directory. The icon signifies your home directory which is /home/micha378." The "Create a Subdomain" section contains a form with two fields: "Subdomain:" with a text input box (containing a cursor) and a dropdown menu (showing "michaelc1.sgedu.site"), and "Document Root:" with a directory selection icon and a text input box. A "Create" button is positioned below these fields. The "Modify a Subdomain" section is visible at the bottom but is not active.

Create the WordPress Site

Go to the cPanel and scroll down the cPanel until you see the SITEBUILDING SOFTWARE section

The screenshot shows the SiteGround cPanel interface. At the top, the SiteGround logo is on the left, and the text "SCROLL DOWN" with a red arrow pointing downwards is on the right. Below the logo, there are navigation tabs: "Home", "My Accounts", "Support", "Billing", and "Re". The "My Accounts" tab is selected. Below the tabs, the account name "mikehchase54.net" is displayed. The main content area is divided into two sections. The left section is titled "ACCOUNT INFORMATION" and contains a table with the following data:

ACCOUNT INFORMATION	
Expiration date	2014-03-29
IP Address	184.154.225.8
Name Servers:	
ns1.siteground119.com	
ns2.siteground119.com	
How to manage your domain name?	
Server Hostname	siteground119.com

The right section is titled "One-Click" and features a graphic of two computer monitors, one labeled "STAGE" and the other "LIVE", with a circular arrow between them. Below this, there are four icons representing different services: "Subdomains", "Addon Domains", "Parked Domains", and "Redirects".

Create a Subdomain Admin Email ACCOUNT

- When you create the Subdomain WordPress site, the build script is expecting an existing Administrator email account for the subdirectory
- Let's Create one for the “support” subdomain

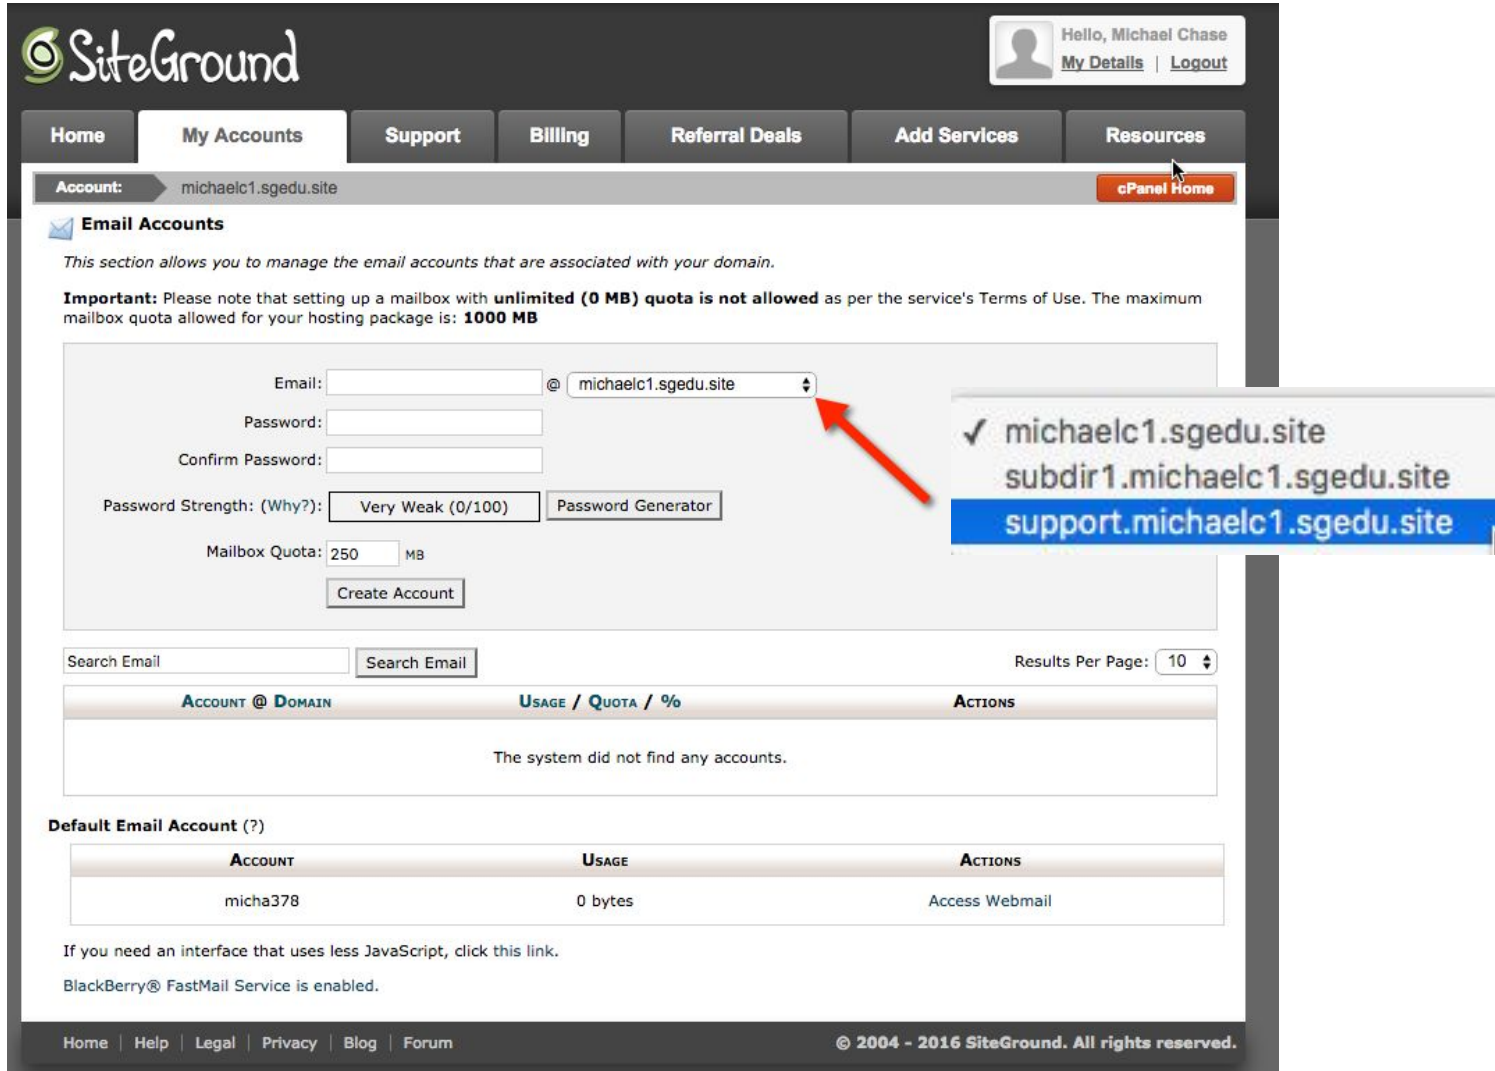

cPanel – Scroll down and select Email Accounts icon

Monthly Transfer	0 bytes / ∞ MB
Email Accounts	0 / ∞
Subdomains	2 / ∞
Parked Domains	0 / ∞
Addon Domains	0 / 0
FTP Accounts	0 / ∞
All SQL Databases	0 / ∞

[expand stats](#)

The screenshot displays the cPanel interface. At the top, there is a row of icons for WordPress-related tools: WordPress Installer, WP Auto Update, WordPress Toolkit, SuperCacher, Staging, SG-Git, and ManageWP. Below this is a section titled 'JOOMLA! TOOLS' with a dropdown arrow, containing icons for Joomla! Installer, Joomla! Auto Update, Joomla! Toolkit, SuperCacher, Staging, and SG-Git. The next section is titled 'MAIL' with a dropdown arrow. A red arrow points to the 'Email Accounts' icon in the first row of the 'MAIL' section. Other icons in the 'MAIL' section include Webmail, SpamAssassin™, Forwarders, Auto Responders, Default Address, Account Level Filtering, User Level Filtering, Import Addresses/Forwarders, Email Authentication, MX Entry, Advanced MX Editor, SpamExperts, and Email Tutorials.

Open the domain dropdown list and select the support subdomain

Select the “Install” button

The screenshot shows the Softaculous website interface. At the top, the 'Softaculous' logo is displayed in a blue banner. Below the logo, a navigation bar contains a home icon and links for 'Scripts : PHP JavaScripts PERL Classes'. A left sidebar lists various script categories: Blogs, Micro Blogs, Portals/CMS, Forums, Image Galleries, Wikis, and Social Networking. The main content area features a red arrow pointing to a blue 'Install' button. Below the button, the text describes WordPress as a state-of-the-art public web standards and usability tool, noting its popularity since 2003 and its release under the GPL license from the Free Software Foundation. The version '3.5.2' is also indicated. On the right side of the page, there is a search bar, a 'Logout' link, and a 'Demo' button. Below these, the WordPress logo is shown, followed by a description of the platform and a 'Write a Review' link.

Choose Language

Step 10

User Name And Password

- This one click setup script is using an auto-generated user name and password
 - That's a good thing
- You can change the user name, **please never change it to “admin” or “Admin” or “administrator” or “Administrator”** ← These names are unsafe!
- Record the user name and password somewhere safe
 - I either keep a password protected document on my desktop of CMS site user names and passwords
 - Or I use the same user name and password for my sites.
 - If I'm doing Drupal sites, this pays off when I have to update a lot of them quickly.

Congratulations

- You have a WordPress CMS **subdomain** website
- So what do you really have?
 - A Content Management Application (CMA)
 - Also known as the **backend** & it's a CMS Website
 - Also know as the **Admin Interface**
 - A Content Delivery Application (CDA)
 - Also known as the **front end** & it's a CMS Website
 - Also know as the **client facing interface** (CFI)
 - A whole lot of source files on the SiteGround File System in a folder under your host Web-Root folder.
 - This code is the CMA & CDA
 - A database (MySQL) to store all the content and settings info
